Inspiration and possible uses

01

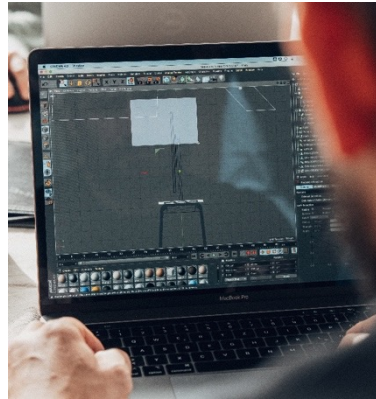

Teamwork.

Oliver Deichmann and Blasius Osko are rethinking work and everything that comes along with a conventional workplace.

The calm after the brainstorm.

The concept of parking ideas and taking them with you – this was the initial spark that led to boards. A collection that the pair have designed around the whiteboard. It is now possible to mount whiteboards horizontally or vertically on all their furniture: “so that no ideas are lost.”

Ad hoc creativity. Sketching out an idea rather than discussing it to death, communicating visually in mixed teams – this is what osko + deichmann find most exciting. “So much can come from a quick sketch. From sticking close to the creation process. The boards collection is designed to be a toolbox – precisely for this work.”

“The concept of parking ideas and taking them with you was the initial spark.”

OLIVER DEICHMANN

boards in detail.

Mount. Connect. Get started.

Creative lateral input?
Brief strategy meeting?
boards does it all –
however and wherever
you want.

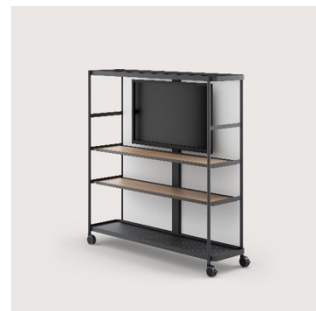

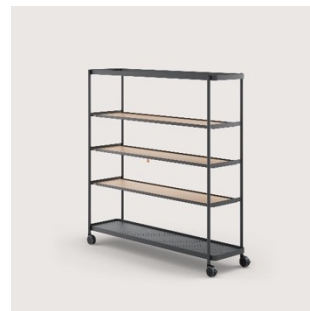

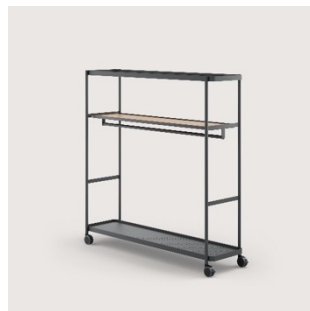

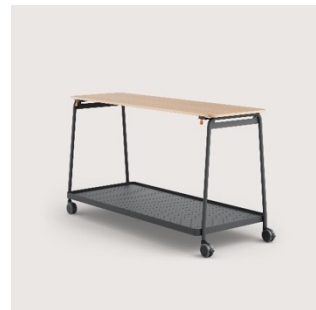

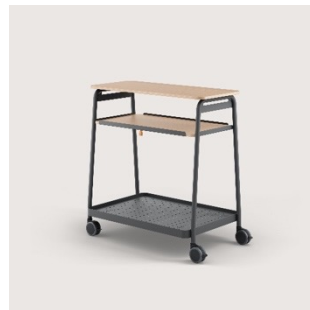

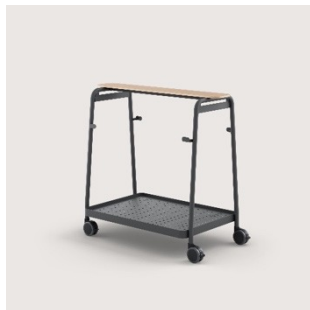

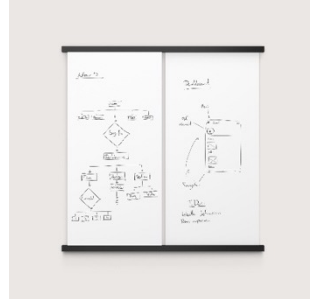

boards can handle all aspects of agile working because the components are designed to be flexible. Everything can be rolled around and is easy to carry and stack. This means that teams can redesign their perfect work environment at any time, making boards just as suitable for start-ups already familiar with New Work as it is for established companies who want to take the first step towards agile working.

boards redefines the workflow.

- The multifunctional range for agile work environments
- Ultra-lightweight, double-sided whiteboards as the main component, also available in a magnetic version
- Addition of tables, storage trolleys, stackable stools and shelves that transform into portable easels
- Shelves can also be used as a wardrobe and media trolley
- Maximum flexibility: casters and functional details like removable elements and optional integrated whiteboard for a wide range of applications
- Wide range of accessories, including whiteboard connectors, toolboxes, electrification and wall rails
- Super simple and intuitive handling, can also be used as a room divider
- Materials can be separated and sorted and are recyclable

The complete boards ensemble.

Welcome to boards.

The series is characterised by a clear design statement with elegant rounded corners and a slim, matt powder-coated structure in lava or stone – visually, this gives the furniture a feeling of lightness.

Matching table tops and shelves can be selected in HPL, oak veneer or NanoTec in a selection of colours.

Compact starter kit.

The starter kit is the perfect introduction to the world of agile working. The portable table holds 8 whiteboards, 4 nate s bar stools, 4 boards stools, a mountable tray and a set of 6 whiteboard connectors.

Once assembled, the set provides a basic configuration for various workshop spaces and scenarios.

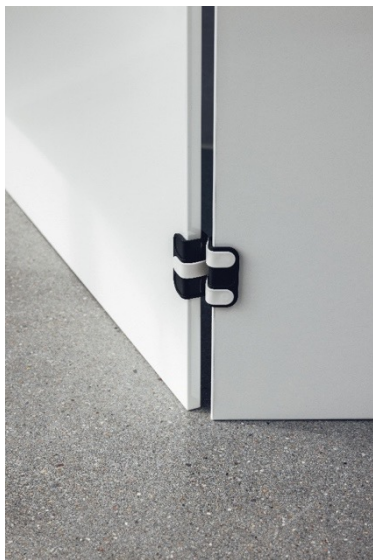

Whiteboards: the heart of the boards range.

The boards series is centred around the ultra-light, double-sided whiteboards.

They can be inserted in the tables, stools and shelf units in landscape or portrait format. Or you can simply take them with you to capture brilliant ideas.

Also suitable for use with whiteboard connectors.

Handy plug connectors join the whiteboards to create a screen of boards or a booth you can write all over.

These large creative surfaces zone the room and provide both privacy and sound insulation.

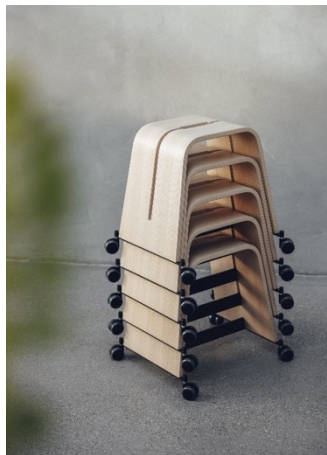

With you all the way.

This seat is always on the go: free-wheeling casters allow the versatile stool to be quickly put in place or pushed aside.

With load-dependent braked castors and the correct load, the new brakes are released, and the stools can move freely. They lock in place without a minimum weight.

In addition, up to five stools can be stacked to save space.

A deep groove along the seat serves as a grip hole and whiteboard holder – one of three. The extended metal frame makes it possible to simultaneously insert a whiteboard on each side just above the casters.

A standing table for flexible project work.

The mobile standing table provides the foundation for agile project work. Loops identify the clever pull-outs for placing the whiteboards in landscape format.

The punched metal base provides additional storage space and turns the table into a convenient transport trolley. For stools, work materials and up to eight securely stacked whiteboards.

Clear the way for this work desk.

The work desk impresses as a presentation stand or lectern. The pull-out shelf allows whiteboards to be placed in landscape format.

In addition, whiteboards can simply be inserted in the stylishly extended frame in portrait format.

This trolley has lots of surprises in store.

The storage trolley with organisational sorting rails holds up to 16 whiteboards.

Metal tabs on both sides of the frame secure items in place during transportation, while also facilitating the placement of whiteboards in landscape format.

More than just a shelf unit.

Everything is within easy reach here – on the mobile boards shelf unit: its three shelves and the punched metal base provide lots of space for everything that makes working life more efficient and effective.

The middle shelf can be pulled out to transform the frame into an easel for whiteboards in landscape format. An optional rail system can be mounted on the frame to accommodate even more ultra-light whiteboards. The result is a quick room divider that can be used to set up new functional areas.

Everything in place.

Ideas with potential are the hallmark of improvements, which is precisely how the mobile boards shelf builds on the possibilities it opens up: It becomes a versatile media trolley with integrated storage space or creates a tidy wardrobe. The extremely lightweight whiteboards become even more attractive in a magnetic design. When correctly occupied, the new brakes are released, and the stools can move around freely. If the minimum weight is not met, they lock. The stool becomes a stable easel.

Creativity on rails.

The series double rail system can be mounted individually on the wall or on the frame of the shelf unit.

The rails are tailored to the size of two whiteboards and can be expanded with any number of additional wall rails.

Practical accessories.

Optional aids such as toolboxes, a mountable tray and useful hooks – e.g. for an electrical strip with practical loops – keep everything you need on hand.

Impressions.

The boards starter kit.

FROM ME TO WE

Creative space

Shelf units, tables and stools that can be combined in any number of ways not only provide creative surfaces but also versatile seating and workspaces. Ideal for creative workshops and agile project work.

Workshop space

boards configurations subdivide rooms into multiple work areas and presentation corners.

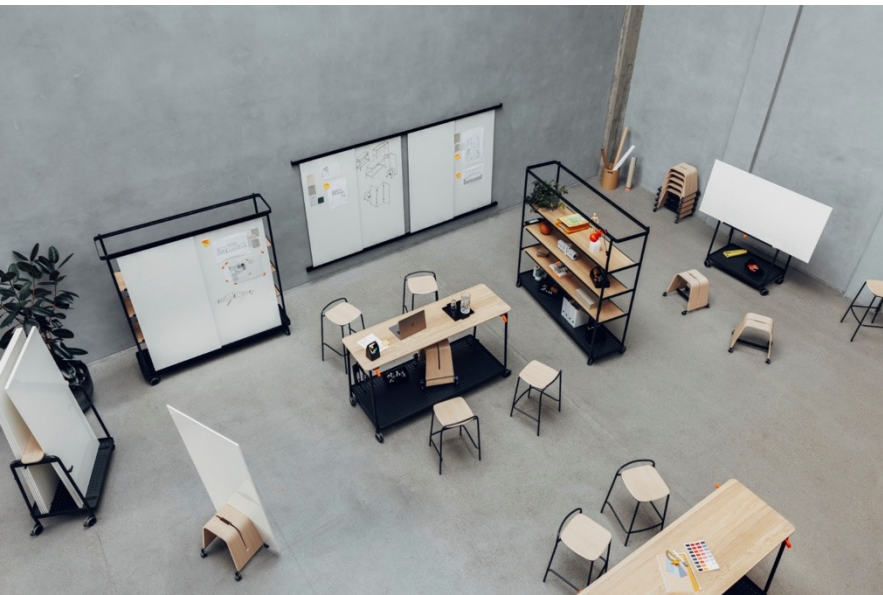

Exhibition space

Equipped with whiteboards, the stools form portable easels for demonstrating and presenting work results.

Brainstorming space

Whiteboard wall rails and stools create a perfect work environment for brainstorming and planning.

Team space

In combination with bar stools, the standing table forms the central hub for collaboration and agile project work.

Maker space

The chaotic arrangement of the furniture signals creativity and provides wide-ranging opportunities for collaborative activities and brainstorming.

Brunner represents furniture
that makes new things possible.
