01

Product idea.

You sit with your eyes.

- Eye-catching, lightweight chairs: plastic chair bodies in the corona family
- Shell with or without armrests
- Available in seven colours with matching coating hues
- Also available with a seat shell made of high-quality recycled plastic
- Large selection of different frame types such as four-legged, sled-base, spider and centre leg frames
- Also available with a seat cushion or cosy soft upholstery of the entire shell in a loose cushion look
- Easy to clean and disinfect
- Versatile and adaptable, from cafeterias and restaurants to hospitals

Striking and lightweight design.

The matt plastic shells are visually reminiscent of the existing upholstered models and work on various bases.

As a practical yet comfortable highlight, crona light is ideal for catering and care settings. It is easy to clean and its properties and finish provide protection against dirt and germs.

Vibrant colour combinations: including when combined with the optional seat cushion.

Always striking just the right note.

crona light features the perfect shade, and the perfect frame, for any interior. The possible uses are equally diverse in cafeterias, restaurants, conference rooms and hospitals.

Also featuring a sled-base frame:
up to 5 chairs can be stacked quite easily.

For everyone who wants everything.

To take comfort to the next level, the seat shell is available with optional soft, single-colour upholstery in a relaxed cushioned look.

This version can be combined with all six frame types, with armrests as a further option. The features can now be configured one by one to create the perfect chair for use in cafeterias, restaurants, conference rooms and hospitals.

Soft fully upholstered version:
featuring a relaxed cushioned look with seat cushion insert.

The next step in a sustainable future

In the spirit of sustainable reinterpretation, the seat shell of the corona light series is also optionally available in recycled plastic.

The optional plastic shell is available in three natural colours and can be combined with the various frame versions to suit your own individual taste. Add an extra splash of colour using our seat cushions – which we are also pleased to offer in recycled materials.

agave

pebble

Shell

High-quality processed post-industrial recycled plastic*

Seat cushion (optional)

Large selection of fabrics made from recycled fibres or natural yarns (e.g. new wool)

Frame

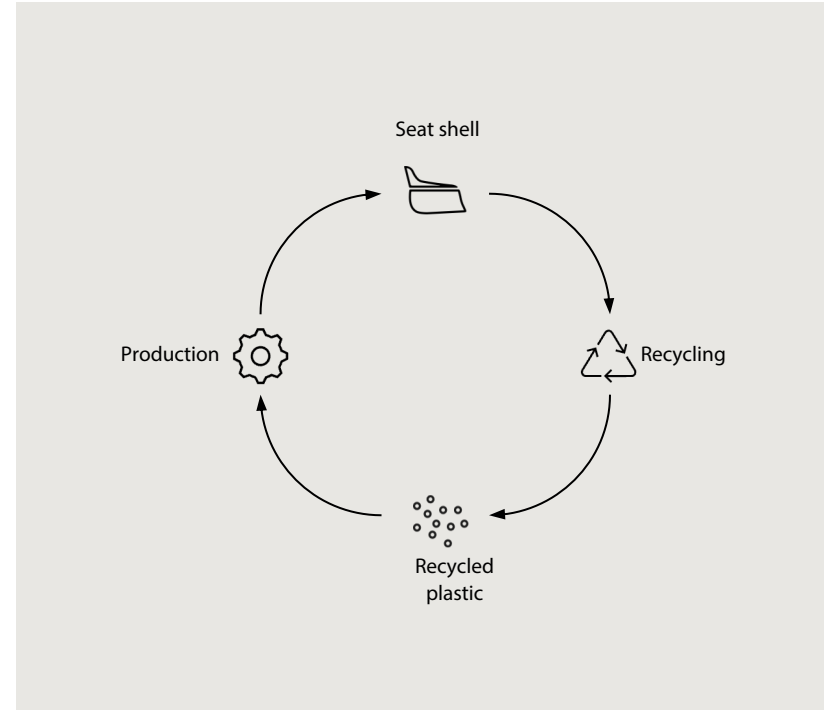

Versatile use thanks to many different frame options within the corona light series

*To achieve a perfect material and processing quality, additional additives are added (e.g. colour concentrate, glass fibres approx. 15 %).

A plastic shell with impact.

Our seat shell is made from post-industrial recycled plastic, specifically a colourless, unmixed polypropylene homopolymer. This significantly reduces the use of primary materials such as crude oil. The use of this recycled material from industrial sources therefore helps to conserve resources while ensuring reliable colour accuracy.

In contrast to the regular corona light shell made of polypropylene, **up to 21% of CO₂ emissions can be saved** with each seat shell thanks to the use of recycled plastic.
